

Introducing OneDrop!

It's Your Own File Sharing System

Leverage your existing Azure subscription and deploy OneDrop as your organizational file sharing system.

Control how your employees and customers transfer big files.

What is OneDrop?

OneDrop provides an Cloud-based file repository with sharing capabilities and smart media processing. It enables secure sharing within and outside the organization. It offers an organizational approach by syncing with your AD.

It eliminates the hassle of big file transfers and provides a streaming solution for video file sharing.

OneDrop's administrative control is comprehensive – from user management to complete permissions control over the files.

Why customers use OneDrop

- Share big files
- Centralize organizational work
- Ease of globalization
- Media files handling at its finest

Share Big Files Easily

- Get rid of that eternal big attachments issue
- Go global with your files via Azure
- Deployed to your Azure subscription

Centralize organizational content

- One-click share URL generation
- Cross-platform web client
- Windows-grade administrative control

Be in Control

- Control what you share
- One Drop Shop
- Define your own security policies

When we looked for suitable, affordable solution for accumulating and distributing our videos and images, OneDrop provided a full coverage of our requirements and helped reducing our time-to-news-channel tremendously.
